Capstone: Big Data and Business Analytics

03/24/2017

The performance analysis is in the same file that contains the code. I added the performance analysis for each of the code lines. What did slow things down was when we tried loading the parking data. Since there is a lot of data then we can assume that the cause of the slow performance was because there is a huge amount of data. Another thing that slows things down is when we try to plot graphs. As for making the implementation faster, we used R. By using R we were able to run our code lines much faster.
